Dear [name],

Welcome to your LittleGENEius adventure! We are super excited and thankful to you and your family for letting us explore your amazing genes. Inside your DNA are tiny little messages that make you YOU, your talents, your strengths, and even how your body grows and stays healthy.

This report is made especially for you, with lots of care and love by our team. You can think of it like a magical storybook about yourself, a book that tells the story hidden inside your genes! Before you start your journey, here's a fun guide to what you'll find inside:

Limitation of Genetic Summary

This part helps you and your family understand what your genes can tell you, and what they cannot. It also reminds everyone that doctors are still very important for keeping you healthy and strong!

Genetics 101

This is where you learn the basics about genes and DNA, explained in a simple, fun, and easy way.

How Does LittleGENEius Work

Ever wonder what happens to your DNA after your sample is taken? This section shows how your DNA goes on a special journey to become your personal report.

Fun Facts About Genes

Get ready for some wow moments! This part is full of cool, surprising, and fun facts about DNA that make science exciting.

Top 3 Genetic Result

Here are three of your most interesting and awesome genetic traits! These are some of the special strengths that make you shine.

Your Genetic Screening Results

This is the main part of your report. It talks about your personality, feelings, learning style, sports talents, how your body uses food, and some childhood health traits, all explained in a simple way just for you.

Nurturing Your LittleGENEius's Potential: A Guide for Parents

This special section is for parents. It shares gentle tips and ideas to help support their child at home, in school, during playtime, and as they grow, so every child can feel confident, happy, and healthy.

We hope you have lots of fun discovering your LittleGENEius story. This is just the beginning of an exciting journey to learning more about yourself!

**Every child is a
LittleGENEius
in their own way!**

**At LittleGENEius, we help
you uncover that story,
celebrating what makes
you extraordinary.**

**Together, let's turn these
genetic insights into a
brighter, healthier, and
happier tomorrow.**

Genetic Screening: Important Limitations

Please read this section carefully before reviewing your genetic screening report. For interpretation of results and health-related decisions, consultation with a physician, genetic counsellor, or other qualified healthcare professional is strongly recommended.

Genetic screening is designed to identify whether an individual has a genetic predisposition or increased likelihood of developing certain inherited diseases or conditions. However, these results cannot determine with certainty whether symptoms will occur, how severe they may be, or how a condition may progress over time.

A negative result does not guarantee that you will never develop an inherited disease or disorder. The test detects only specific genetic markers that are well-documented in medical research. Many health outcomes are also influenced by environmental, lifestyle, and other non-genetic factors.

The information provided in this report—including any additional health-related insights—is intended solely for informational and educational purposes. It does not represent a medical diagnosis or a comprehensive assessment of current or future health status. All findings should be confirmed and discussed with a healthcare professional in a clinical setting before any medical decisions or actions are taken.

We do not guarantee, recommend, or endorse any diagnosis, treatment, therapy, medication, medical device, or strategy based solely on the results of this genetic screening. The information provided is not a substitute for professional medical advice. Individuals should not delay, disregard, or avoid seeking appropriate medical care based on this report.

Genetics 101

What are Genes?

Genes are like a special recipe book inside your body. They give tiny instructions that help you:

Grow

Think

Play

Learn

Stay healthy

What are Genetic Variants?

Sometimes the recipe has small changes, like adding extra sprinkles to your ice cream. These little changes are called genetic variants.

They make each child **unique** and **special**.

What is a Genotype?

Your genotype is the mix of instructions you got from your mom and dad. That's why you may have:

Dad's
smile

Mom's
voice

Or your very own
special mix!

Why Do We Check Genes?

By reading your genes, we can learn fun and helpful things about you:

Personality Traits

The little things that make you, You!

Emotional Intelligence (EQ)

How you understand and care about feelings.

IQ & Academic Talents

How you think, solve problems, and learn new things.

Sport Talents

How your body moves, runs, and plays.

Child-Onset Diseases

Things to watch out for to keep you strong and healthy.

Nutrient Metabolism

How your body uses food to make energy.

Remember...

Genes give you a starting point, like the first page of a storybook.

But how the story goes depends on your choices, habits, and dreams.

Every child is a LittleGENEius in their own way!

How Does LittleGENEius Work?

Sample Collection

We collect a tiny sample (like saliva or a cheek swab).

Finding Variants

The chip shows us which small changes (variants) you have in your genes.

Your LittleGENEius Profile

Finally, you get a colorful report all about you!

1

2

3

4

5

Lab Analysis

In the lab, we look at your DNA using a smart tool called microarray SNP genotyping.

We use a special chip (ASA customized beadchip) that can check thousands of tiny spots in your DNA all at once.

Making the Report

We match these results to important traits, like how your body uses food, your learning style, or your talents.

How to Read This Report:

(Good)

(Normal)

(Moderate risk)

(High risk)

(your result)

You likely stay calm even when things don't go your way.

(A brief explanation of your result)

Fun Facts About Genes

Did you know?

You share 99.9% of your DNA with every other human being.

You share about 60% of your DNA with **bananas** (but don't worry, you won't turn into one!).

Identical twins

have almost the same DNA, but their fingerprints are different.

Your body has **over 30 trillion cells**, and almost every cell has the same DNA.

DNA is so small, you'd need a **super microscope** to see it!

TOP 3 STRENGTHS CERTIFICATE

of _____

A highlight of your strongest genetically influenced traits, based on the analysis:

- 1- Aerobic Capacity
- 2- Cardiovascular Performance
- 3- Intelligence

*These strengths reflect your natural potential.
May you continue to flourish as you grow.*

Personality Traits

Refers to consistent patterns of thinking, feeling, and behaving that influence how an individual interacts with others, responds to situations, and regulates emotions and impulses.

Anger

Anger is a temperamental trait that reflects how easily and intensely a child may respond to frustration, discomfort or perceived challenges.

You likely stay calm even when things don't go your way

Novelty Seeking Behavior

Genetic inclination toward exploring new environments, taking risks and pursue new and stimulating activities.

You enjoy exploring and try different activities

Sensitive Personality

Heightened awareness and responsiveness to emotional, social and environmental stimuli, making children deeply feel emotions, be highly empathetic and notice subtle changes in their surroundings.

You may feel things deeply and notice subtle emotional shifts in others

Resurgence of Fear

Tendency to re-express fear responses after initial fear reduction, affecting emotional development particularly in new or stressful settings.

Your past worries might come back occasionally, especially under stress

Loneliness

Biological susceptibility to feeling socially isolated or disconnected, regardless of social context.

You may tend to experience loneliness, especially in emotionally challenging situations

Reward Dependence

Tendency to respond strongly to social approval, praise and external rewards, reflecting how the child is motivated by positive reinforcement.

You are intrinsically motivated but respond positively to encouragements

Vulnerability to Parental Overcontrol

Child's susceptibility to negative psychological, emotional, or behavioral effects when parents or guardians excessively regulate, monitor, or restrict their actions, decisions, or personal autonomy.

You likely manage structured rules well with little stress

Harm Avoidance Behaviour

Personality trait characterized by a tendency to be cautious, fearful, or averse of potential danger or harm. As a result, individuals with harm avoidance often display behaviors that are associated with other mental health issues like anxiety disorder.

You might be careful when trying something new or risky

Gambling (Addiction)

Behavioral tendency characterized by compulsive engagement in gambling activities despite negative consequences.

You may be drawn to high-stimulation activities and small bets

Emotional Intelligence (EQ)

Indicates the capacity to perceive, understand, manage, and influence emotions in oneself and others, supporting effective communication, interpersonal relationships, and overall well-being.

Empathy

The ability to recognize, understand, and respond to others' emotions from early childhood.

You likely tune in to others' emotions and respond supportively

Resilience

Genetic influence on a child's ability to bounce back from stress, setbacks, or emotional challenges.

You likely adapt well to change and keep going through challenges

Social Network

Tendency to form and maintain friendships and social bonds, influenced by sociability and emotional traits.

You likely enjoy building friendships and value being part of a group

Social Rejection

Genetic sensitivity to peer rejection or exclusion, often affecting emotional stability or confidence.

You might feel hurt by exclusion but recover relatively well

Facial Emotion Recognition

Ability to detect and interpret others' emotions based on facial expressions.

You probably excel at reading people's emotions just by looking at their faces

IQ & Academic Talents

Encompasses cognitive abilities and learning skills that contribute to intellectual performance, including problem-solving, memory, reasoning, and academic achievement.

Childhood Intelligence

Child's overall capacity to learn, understand, reason, and solve problems. It is more than just memorizing facts or getting good grades.

You probably excel in intellectual tasks and show high-level reasoning skills from a young age

Memory Performance

Ability of recalling and using learned information repeatedly.

You likely retain and recall information well, especially in structured learning

Hippocampal Volume

Size of a brain region involved in memory, learning, and emotional regulation, partly shaped by genetics.

You may process new information at a slower rate but still retain key points

Cognitive Ability

Overall mental processing capacity for reasoning, problem-solving, and understanding.

You might perform well in some thinking tasks but need guidance in others

Mathematics Ability

Genetic predisposition toward numerical reasoning, logic, and mathematical thinking.

You likely grasp numbers and mathematical logic with minimal effort

Intelligence

Intelligence is the ability to acquire and apply knowledge and skills.

You likely learn quickly and apply knowledge across different domains

Working Memory

Working memory is a mental workspace that helps you hold and use information while performing everyday tasks. It allows you to follow instructions, solve problems, learn new skills, and make decisions.

You likely manage multiple pieces of information at once with little difficulty

Educational Attainment

Genetic likelihood of achieving higher education levels, predicted from cognitive and personality traits.

You probably excel academically and are motivated to pursue higher learning

Work Reading Ability

Reading skill and comprehension ability tied to language development and cognitive processing genes.

You probably read fluently and grasp the meaning of words with ease

Reading and Spelling

Genetic foundation for decoding written language and spelling accuracy in early academic performance.

You probably excel in both reading comprehension and spelling accuracy

Sport Talents

Represents physical and physiological traits that enhance performance in athletic and physical activities, including strength, endurance, agility, and speed.

Power

Genetic potential for short bursts of strength and explosive movement, important for strength-based sports.

You likely perform well in activities requiring quick strength and reaction

Endurance

Ability to sustain physical activity over long periods, related to aerobic and muscular efficiency genes.

You likely sustain physical activity well over time

Sprint Performance

Predisposition for high-speed, short-duration running performance, tied to fast-twitch muscle composition.

You may lack quick acceleration and may struggle in short bursts of speed

Muscular Strength

Muscular strength is determined by how much force you can exert or how much weight you can lift. Building muscular strength uses heavier weights for fewer repetitions.

You probably possess high muscular strength and respond well to resistance training

Aerobic Capacity

Genetically influenced efficiency of oxygen intake and usage during continuous physical activity.

You probably have excellent oxygen use and perform well in endurance sports

Cardiovascular Performance

Function of heart, lung, and blood vessel under exertion, shaped by inherited physiological traits.

You likely recover well and maintain performance during activity

Martial Art

Genetic profile supporting agility, coordination, balance, and mental discipline relevant to martial arts.

You likely adapt quickly to movement patterns and strategic thinking

Child-Onset Diseases

Refers to medical conditions that typically manifest during childhood, which may affect growth, development, and long-term health outcomes.

Adolescent Idiopathic Scoliosis

A condition involving curvature of the spine during adolescent growth.

You have a strong genetic likelihood of adolescent spinal curvature

Allergic Rhinitis

Also known as hay fever, is an allergic reaction that causes sneezing, nasal congestion, and runny nose.

You are moderately likely to develop nasal allergies

Asthma

A chronic respiratory condition involving airway inflammation and constriction.

Your risk of asthma is likely low with minimal airway sensitivity

Attention-Deficit Hyperactivity Disorder (ADHD)

A neurodevelopmental disorder characterized by inattention, impulsivity, and hyperactivity.

You likely have a low risk of attention and hyperactivity issues

Celiac Disease

An autoimmune disorder triggered by the ingestion of gluten.

You likely have a low genetic risk of gluten intolerance

Childhood Epilepsy

A condition marked by recurrent seizures during childhood.

Your risk of childhood seizures is likely very low

Crohn's Disease

A chronic inflammatory bowel disease that affects the digestive tract.

You are unlikely to develop inflammatory bowel conditions

Dyslexia

A learning disorder involving difficulty in reading due to problems identifying speech sounds.

You likely show strong reading and phonological processing skills

Early Speech Development

The pace and clarity with which a child begins to speak and express language.

You are genetically predisposed to early and clear speech development

Invasive Pneumococcal Disease

A serious infection caused by Streptococcus pneumoniae bacteria.

You may carry mild susceptibility, particularly when immunity is compromised

Juvenile Idiopathic Arthritis

A form of arthritis in children causing joint inflammation and stiffness.

Your likelihood of childhood arthritis is very low

Kawasaki Disease

An illness in children that causes blood vessel inflammation throughout the body.

You likely have a low genetic risk for Kawasaki-related inflammation

Long QT Syndrome

A heart rhythm disorder that can cause fast, chaotic heartbeats.

You may have a strong inherited likelihood of Long QT-related arrhythmia

Meningococcal Disease

A bacterial infection that can lead to meningitis and other serious conditions. It's contagious between people, usually from infected spit or mucus.

You are genetically more predisposed to meningococcal infections

Obesity (Childhood Onset)

A medical condition involving excess body fat developing early in life.

You have a strong genetic predisposition toward childhood obesity

Obsessive-Compulsive Disorder (OCD)

A mental health condition involving unwanted repetitive thoughts and behaviors.

You likely exhibit low obsessive or compulsive tendencies

Pathological Myopia

A severe form of nearsightedness that can progress with age and cause eye problems.

You may need mild vision correction over time

Restless Legs Syndrome

A neurological disorder causing unpleasant leg sensations and an urge to move them.

You are less likely to experience restless legs or sleep disturbance

Teething

The process of tooth eruption in infants and young children.

Teeth emerge on time, following typical patterns

Tourette Syndrome

A neurological disorder involving repetitive, involuntary movements and vocalizations.

You may have occasional mild tics or repetitive tendencies

Ulcerative Colitis

A chronic condition causing inflammation and ulcers in the colon and rectum.

You may carry a mild genetic predisposition for bowel inflammation

Nutrient Metabolism

How the body naturally processes and uses key nutrients, including vitamins, minerals, proteins, and fats. This includes how efficiently nutrients are absorbed, broken down, and utilised to support growth, energy, and overall health.

Caffeine Metabolism

How quickly the body breaks down and clears caffeine.

You break down caffeine quickly and are less affected by it

Calcium Metabolism

How well the body absorbs and regulates calcium for strong bones and healthy cells.

Your calcium absorption and utilization are highly efficient

Carbohydrate Metabolism

How the body digests carbohydrates and converts them into energy.

You may have high efficiency in processing carbohydrates, supporting stable energy levels

Carotene Level

How effectively the body converts beta-carotene from foods into vitamin A.

You have higher efficiency in converting beta-carotene to vitamin A

Coenzyme Q10

How effectively the body produces and utilizes coenzyme Q10.

Your body may produce/utilize higher CoQ10, lowering antioxidant capacity

Homocysteine Metabolism

How the body processes homocysteine, which affects heart and brain health.

You may have high efficiency in clearing homocysteine, lowering the risk of buildup

Gluten Sensitivity

How the body reacts to gluten found in wheat and related grains.

You are unlikely to experience gluten sensitivity

Lactose Intolerance

How well the body digests lactose, the sugar in milk and dairy products.

Low tendency toward lactose intolerance suggests easier digestion of dairy

Polyunsaturated Fatty Acids

How the body uses and balances omega-3 and omega-6 fatty acids.

PUFA balance appears stable

Vitamin A

How the body absorbs and uses vitamin A for vision, skin, and immunity.

Levels are within the typical range

Vitamin B2

How the body processes riboflavin (B2) to support energy and cell function.

Metabolism of B2 is about average

Vitamin B6

How the body handles B6, important for protein metabolism and brain signals.

Availability of vitamin B6 appears stable

Vitamin B12

How the body absorbs and uses B12 for blood and nerve health.

Levels are within the expected range

Vitamin C

How the body absorbs and uses vitamin C to support immunity and antioxidant defense.

Vitamin C levels appear steady

Vitamin D

How the body processes vitamin D for bones, immunity, and hormone balance.

You may have higher vitamin D activation and absorption

Vitamin E

How the body absorbs and uses vitamin E to protect cells from damage.

Vitamin E availability appears adequate

Selenium

How the body absorbs and uses selenium, essential for thyroid function and antioxidants.

You may have high selenium utilization

Nurturing Your
LittleGENEius's Potential:

A Guide for Parents

Love

Support

Grow

This section is created especially for parents to help understand their child's unique gifts and talents.

It offers simple, loving ways to support your LittleGENEius every day — with patience, encouragement, and care.

These insights are meant to inspire and guide you, never to limit your child's potential. Together, let's help your LittleGENEius grow happy, confident, and shine in their own special way.

Where Your LittleGENEius May Shine

Activities to explore today, possibilities for tomorrow.

This page highlights areas that stood out in your child's report, as well as areas worth gentle exploration. It is not a prediction of future careers, but a guide to help parents decide what to nurture first.

Language & Communication

Based on your child's results:

Early speech is favorable; reading, spelling, and word recognition are strong, and dyslexia risk is low. Accurate facial emotion reading supports clear and responsive communication in everyday settings.

Worth exploring:

- Daily reading with high-interest books and short discussions
- Storytelling, show-and-tell, debate or emcee roles
- Creative writing using simple story frames and word banks

Related roles (examples):

Writer, presenter, student librarian, debate team

Thinking, Logic & Problem-Solving

Based on your child's results:

Childhood intelligence and educational attainment are favorable; working memory and recall are generally strong. Learning moves fastest with step-by-step instruction, while new topics benefit from extra examples and retrieval practice.

Worth exploring:

- Logic puzzles, building kits, coding games, hands-on science
- Worked examples and visual organizers before independent practice
- Spaced retrieval practice with short, repeated reviews

Related roles (examples):

Engineer, analyst, coder, researcher

Sports & Physical Activities

Based on your child's results:

Aerobic capacity, endurance, muscular strength, and recovery are supportive strengths; quick acceleration in short sprints is less pronounced. Prioritize steady-pace and skills-based activities, building speed gradually with technique.

Worth exploring:

- Swimming, cycling, park jogs or distance runs
- Hiking and games that mix endurance and coordination
- Martial arts with progressive, technique-based instruction

Related roles (examples):

Athlete, coach, PE leader, fitness trainer

Social, Leadership & Helping Roles

Based on your child's results:

Strong facial emotion recognition and supportive empathy help teamwork. A careful, sensitive temperament may prefer smaller groups, clear roles, and specific, encouraging feedback.

Worth exploring:

- Small group projects with clear responsibilities
- Buddy programs and service or eco clubs
- Predictable routines with private, specific praise

Related roles (examples):

Class monitor, peer mentor, club committee helper, group project leader

Art & Creative Expression

Based on your child's results:

A highly sensitive profile suggests creative outlets can help process feelings and express ideas confidently, even if not specifically emphasized by the screen.

Worth exploring:

- Drawing, painting, crafts, journaling, comics
- Low-pressure drama or role-play
- Unstructured creativity time with simple materials

Related roles (examples):

Artist, designer, illustrator, storyteller

Music & Rhythm

Based on your child's results:

No music-specific advantages are highlighted; treat this as open for exploration and enjoyment.

Worth exploring:

- Rhythm games and clapping or step patterns
- Beginner keyboard or ukulele
- Simple beat-making apps to explore patterns

Related roles (examples):

Ensemble member, performer, sound hobbyist

Important Note for Parents

Pick one or two areas that feel easy and enjoyable to start, then rotate activities for a healthy mix of movement, thinking, and creativity. Keep sessions short and routine, and praise effort and small progress. Follow curiosity and adjust the pace to keep confidence growing.

Helping Your LittleGENEius Shine

Simple ways parents can support growth, learning, and confidence

This guide is based on your child's overall genetic profile.

Genes show natural tendencies — daily support helps those tendencies grow into strengths.

Feelings & Behaviour

What helps

- Keep routines predictable; preview changes and model the first try
- Name emotions and use calm words; offer private, specific praise
- Give choices to build independence and reduce over-control reactions
- Create a quiet space for cool-down when feelings run high

Try to avoid

- Sudden changes without warning
- Harsh or shaming language
- Over-controlling every decision

Learning & Thinking

What helps

- Teach with clear, step-by-step sequences and worked examples
- Use visuals and hands-on tasks; move from concrete to pictorial to abstract
- Short learning blocks with breaks to keep attention fresh
- Strengthen memory with retrieval practice and quick review cards

Try to avoid

- Long tuition blocks without rest
- Jumping to abstract content too early
- Labels like slow or lazy

Play & Movement

What helps

- Choose endurance and strength-focused activities (swimming, cycling, hiking)
- Use technique drills to build speed gradually
- Let children sample different sports; focus on fun and steady progress

Try to avoid

- High-intensity sprint-only sessions that feel uncomfortable
- Ignoring signs of fatigue

Food, Sleep & Daily Habits

What helps

- Balanced meals and hydration; steady sleep routines
- Regular outdoor time and movement to support energy balance
- Limit screens before bed to protect sleep quality

Try to avoid

- Skipping meals or irregular bedtimes
- Sugary drinks and heavy snacks close to bedtime
- Screens right before sleep

If You Notice This... Try This

If your child...	You can try...
Hesitates with new or risky activities	Preview changes, use first-then schedules, and model the first attempt together
Feels hurt when excluded or prefers small groups	Pair with a buddy and give clear roles in group tasks
Reads well but forgets details later	Play quick retrieval games and use review cards after reading
Shows deep feelings or strong reactions	Offer a quiet corner and choices; use calm, specific praise
Struggles with quick sprints	Choose steady-pace sports and technique drills to build speed gradually

A Gentle Reminder

Genes are a starting point, not a limit.

Love, support, healthy routines, and encouragement play a powerful role in helping every child grow.

Every child is a LittleGENEius in their own way.

Practical Parental Guide

Support Personality

If your child is shy, introduce them slowly to new groups. If adventurous, guide them with safe boundaries.

Celebrate Creativity

Display artwork or record performances to build confidence.

Boost EQ

Talk openly about feelings and model empathy at home.

Encourage Sports

Focus on fun and participation, not just winning.

Grow IQ & Talents

Provide both structured learning and free play; balance academics with creativity.

Support Health

Use genetics as a guide, not a limit. Good sleep, nutrition, and love always come first.

Helpful Tips

Supporting Your LittleGENEius

Core Traits	Watch Out For	Encourage
Personality Traits	• Strong reactions to stress. • Easily discouraged in new situations.	• Build a predictable routine. • Praise small achievements. • Teach calm breathing for stressful moments.
Emotional Intelligence (EQ)	• Difficulty expressing feelings. • Feeling left out in social groups.	• Role-play emotions ("Show me a happy/sad face"). • Praise kindness when they share or comfort others. • Use storybooks to talk about characters' feelings.
IQ & Academic Talents	• Shorter attention span for certain tasks. • Struggles when learning feels too hard.	• Use puzzles, blocks, and curiosity games. • Connect learning to daily life (count snacks, measure flour). • Celebrate effort, not just results.
Sport Talents	• Lower stamina in some children. • Risk of feeling left out if not athletic.	• Daily outdoor play. • Let them try different sports (cycling, swimming, running). • Focus on fun and teamwork, not just winning.
Child-Onset Diseases	• Traits linked to allergies, asthma, or growth issues. • Family medical history.	• Regular check-ups with the doctor. • Healthy sleep and diet routines. • Early action if symptoms appear.
Nutrient Metabolism	• Possible lower absorption of vitamins/minerals. • Tendency to feel tired if diet is unbalanced.	• Offer colourful meals (fruits, veggies, whole grains). • Outdoor play for Vitamin D. • Water over sugary drinks.

Thank You

**Thank you for letting LittleGENEius
be part of your story.**

**We hope these insights bring you closer
to understanding and supporting your
amazing journey ahead.**

**Because every child truly is a
LittleGENEius in their own way!**
